

Digital fleet management: PACE introduces new web-based dashboard

Karlsruhe, 16.10.2025 – PACE Telematics, the European market leader for mobile payment solutions at gas stations, is expanding its PACE Drive Business Platform. With a new, web-based dashboard, a central control platform for all users is now being introduced, which fundamentally simplifies the management of refueling processes.

The new dashboard serves as the centerpiece for administration and offers companies targeted and intuitive control of their entire vehicle fleet. While drivers continue to authorize their refueling transactions easily and securely via the PACE Drive app, fleet managers now have full transparency and control over all transactions in real time.

A significant enhancement for finance and administration departments is the seamless integration into existing accounting processes. The tax-compliant export of transaction data significantly reduces manual effort. This fully digitized process chain minimizes sources of error, speeds up monthly closings, and finally solves the problem of paperwork with physical fuel receipts.

“Our goal is to reduce the administrative burden for our customers to an absolute minimum,” says Julius Parrisius, VP Business & Operations at PACE Telematics. “With the new dashboard, we are giving self-employed people and team leaders a powerful tool that ensures full transparency and takes care of accounting with a single click.”

The new dashboard is part of the ongoing expansion of PACE Drive Business, which already offers solutions for self-employed individuals (Starter) and small teams (Team).

About PACE Telematics & Connected Fueling

The open Connected Fueling platform, operated by PACE Telematics (Karlsruhe, Germany), enables seamless mobile payment directly at the fuel pump through a uniform, cost-saving integration of all partners with the Connected Fueling cloud system. The independent platform is open to all oil companies, service station operators, fuel card issuers and POS system providers. Additionally, the platform offers automobile manufacturers and app developers flexible interfaces and easily integrable Software Development Kits (SDKs) to incorporate the mobile payment functionality into their systems. For more information, please visit www.connectedfueling.com.
